

Status: FINAL

Patient Name: LASYA A V	Age/Gender: 11Y/F	Patient ID: 3232648
Study Date: N/A	Ref. Doctor: scdc	Accession No: 66626
Reported Date: 5/2/2026, 1:10:40 pm	Modality: CR	Body Part: ABDOMEN

CR ABDOMEN REPORT

History:

The abdominal radiograph demonstrates a normal bowel gas pattern with no evidence of dilatation or obstruction. There is no free air under the diaphragm to suggest perforation. The liver, spleen, pancreas, and kidneys are normal in size, shape, and position, with no focal lesions or abnormal calcifications noted. The gallbladder is well distended without stones or wall thickening. The bladder appears normal, and no abnormal soft tissue densities are seen in the visible portions of the pelvis. Major vessels including the aorta are unremarkable. Lumbar spine shows mild degenerative changes. Overall, the abdominal organs appear within normal limits, and no acute abnormalities are identified.

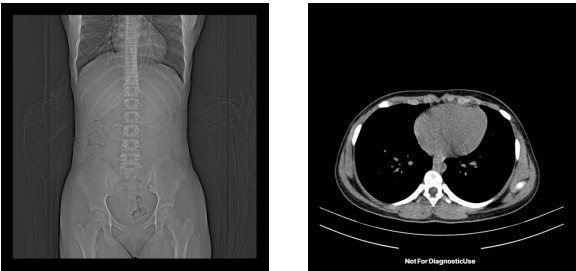

Findings:

The abdominal radiograph demonstrates a normal bowel gas pattern with no evidence of dilatation or obstruction. There is no free air under the diaphragm to suggest perforation. The liver, spleen, pancreas, and kidneys are normal in size, shape, and position, with no focal lesions or abnormal calcifications noted. The gallbladder is well distended without stones or wall thickening. The bladder appears normal, and no abnormal soft tissue densities are seen in the visible portions of the pelvis. Major vessels including the aorta are unremarkable. Lumbar spine shows mild degenerative changes. Overall, the abdominal organs appear within normal limits, and no acute abnormalities are identified.

Conclusion:

The abdominal radiograph demonstrates a normal bowel gas pattern with no evidence of dilatation or obstruction. There is no free air under the diaphragm to suggest perforation. The liver, spleen, pancreas, and kidneys are normal in size, shape, and position, with no focal lesions or abnormal calcifications noted. The gallbladder is well distended without stones or wall thickening. The bladder appears normal, and no abnormal soft tissue densities are seen in the visible portions of the pelvis. Major vessels including the aorta are unremarkable. Lumbar spine shows mild degenerative changes. Overall, the abdominal organs appear within normal limits, and no acute abnormalities are identified. Normal CR abdomen. There is no evidence of bowel obstruction, perforation, mass, or abnormal calcifications. Liver, spleen, kidneys, pancreas, gallbladder, and bladder are unremarkable. No ascites or free fluid is seen. Overall, the study demonstrates a normal abdominal radiograph.
